- **Review the curriculum, learning materials and teaching methods** currently used in the initial training of the two sectors in the partner countries to identify needs in terms of digital learning content development
- **Train VET teachers of the selected sectors** specifically about the project method, related digital tools, innovative assessment practices and digital content creation.
- **Assign real-life project tasks** for VET students, in close collaboration of teachers and labour market representatives.
- **Create project-based, re-usable, high-quality, motivating digital learning content** in an **interdisciplinary approach**, using Open Educational Resources as well as own development, with substantial support from the educational expert partner. Implement the created content in an open repository.
- **Support students in completing their project tasks by designing and delivering mini-courses for them.** using the previously created learning content, and applying methods mastered at the teachers' training.
- **Evaluate and document the process, creating a model** that is published as a **guide** to be followed by selected teachers of other VET institutes and educational experts who deal with digital learning content development.
